

GOL TROPHY CREST

Print on Demand Production Specification

1 Approved Mark

- Use this crest only. Keep the GOL lettering, trophy, red divider, shield shape, spacing, and proportions locked.
- Official aspect ratio is 0.755 width to 1.000 height.
- No background box. Upload with transparency unless the vendor requests a solid ground.

Production preflight

The approved image is raster based. For large format work, use the supplied flat asset or have a production artist create clean vector paths. Proof all redraws against the reference.

2 Official Color Palette

	Charcoal #121C27	RGB 18 28 39 CMYK 54 28 0 85
	Cream #FDEED8	RGB 253 238 216 CMYK 0 6 15 1
	Red #E12227	RGB 225 34 39 CMYK 0 85 83 12

CMYK values are starting conversions. Match a physical proof before bulk production.

3 Upload File Requirements

- Preferred: transparent PNG in sRGB at 300 DPI at final print size.
- Accepted when supported: SVG, EPS, AI, or vector PDF with all text converted to outlines.
- Recommended universal raster upload: 3398 by 4500 pixels, transparent PNG.
- Keep the crest upright. Do not add bleed, a white rectangle, drop shadow, glow, texture, or distressing.

4 Locked Print Sizes

Placement	Final size	Raster at 300 DPI
Left chest	3.00 in W x 3.97 in H	900 x 1192 px
Center front	8.50 in W x 11.26 in H	2550 x 3377 px
Large front or back	10.00 in W x 13.24 in H	3000 x 3973 px

5 Print Method and Placement

- DTF or DTG is preferred for exact three color reproduction and small order quantities.
- Screen print is suitable after the crest is separated into three flat spot colors.
- Center the front crest approximately 3.0 inches below the collar seam.
- For left chest placement, center the crest over the left chest area and preserve the locked aspect ratio.
- Require a digital placement proof and one physical sample before approving a production run.

DO NOT RECOLOR, STRETCH, COMPRESS, ROTATE, REDRAW, OR MODIFY THE TROPHY OR GOL LETTERING

GOL TROPHY CREST

Embroidery on Demand Production Specification

1 Preferred Construction

- Best result: embroidered patch using charcoal twill as the field with cream and red thread.
- Second choice: direct embroidery on a charcoal or black heavyweight garment, using the fabric as the dark field.
- Avoid full charcoal fill on lightweight shirts. It creates excess stitch count and may cause puckering.
- POD vendor must digitize the artwork. Do not treat a PNG or SVG as a machine stitch file.

2 Finished Embroidery Sizes

Use	Width	Height
Minimum	2.75 in	3.64 in
Preferred	3.25 in	4.30 in
Large patch	3.50 in	4.63 in

3 Thread and Color Rules

- Three colors only: charcoal, cream, and red. Match the closest available thread using a physical thread chart.
- Recommended thread: 40 weight polyester. Use 60 weight only when the digitizer needs additional control on the red divider.
- Do not add metallic thread, highlights, shadows, outlines, or extra accent colors.

4 Digitizing Map

Element	Recommended treatment
Charcoal shield field	Twill base for patch, or garment knockout on dark apparel
Cream outer border	Satin stitch, approximately 2.0 mm finished width
GOL lettering	Satin stitch with clean edge run underlay
Cream trophy	Tatami fill for bowl, satin where columns permit
Red divider	Single satin column, minimum 1.5 mm finished width

5 Minimum Stitchability Rules

- Minimum visible line thickness: 1.2 mm. Minimum negative space between elements: 1.5 mm.
- Preserve the open center of the trophy base and all openings inside the GOL lettering.
- Allow normal pull compensation and underlay only. Geometry changes should not exceed 10 percent without written approval.
- Use cutaway backing for direct embroidery. Use a water soluble topping only when the garment surface requires it.
- Request a physical sew out on comparable fabric before listing the product for sale.

6 POD Upload and Approval Workflow

- Upload the transparent full color PNG or SVG as artwork reference. Select the exact finished width before digitizing.
- Most embroidery on demand platforms create their own stitch file. Review their digitized preview, then order one sample.
- Reject any proof that changes the shield outline, GOL lettering, trophy silhouette, red divider, or spacing.
- Archive the approved stitch file with the finished size and vendor name. Machine files are size specific.

FINAL APPROVAL REQUIRES A DIGITAL PROOF AND A PHYSICAL PRINT OR EMBROIDERY SAMPLE
